THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

DETAILED ACTION

Response to Amendment

1. The applicant has amended the following:

Claims: 45 have been amended.

Claims: 24-42, 44 and 46-47 have not been amended.

Claims: 1-23 and 43 have been cancelled.

Allowable Subject Matter

2. Claims: 24-42 and 44-47 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The applicant's independent claims disclose, *inter alia*, a method, processing system, non-transitory computer readable storage medium and telecommunications network for selecting a subset of sites within a whole set of candidate sites for activating one or more radio stations in a telecommunications network comprising the steps of building an initial solution comprising a subset of sites obtained by starting from a potential network configuration comprising as active the whole set of candidate sites wherein the initial solution comprises compulsorily active cells corresponding to already active cells in the physical network and optimizing the initial solution by activating "inactive" sites and/or deactivating "active" sites; in order to minimize a predetermined cost function for the solution, wherein the predetermined cost function includes a term

Art Unit: 2617

pointing out the presence of pilot pollution in the system, the term including a ratio between global traffic in pilot pollution associated with a set of active cells in an examined solution and maximum pilot pollution that can be found in the potential network configuration, and wherein at least one of the “active” sites is deactivated based on the term pointing out the present of the pilot pollution, said steps of building and optimizing the initial solution being adapted to define solutions having a geographic coverage wider than a predefined minimum coverage area and being adapted to manage an amount of traffic greater than a predefined minimum value of expected traffic.

4. The following are details of the closest prior arts of record found:

Furukawa discloses a base station cell design method and base station cell design apparatus having a plurality of base station candidate locations and installing a base station in anyone of these base station candidate locations based on a predetermined objective function wherein location candidate points where the base station is impossible to install and wherein no traffic occurs are excluded. In addition, Furukawa discloses activating each candidate location for a base station until the traffic coverage ratio is greater than the required traffic coverage ratio as well as disclosing deleting useless base stations so as to have a least sufficient number of base stations for the system.

O'Byrne discloses a pilot management process that identifies areas of possible problems with pilot pollution and providing a list of base stations that have a ratio of pilot channel power relative to the interference above a threshold.

Vasudevan discloses a system for optimizing an existing wireless network and additions to an existing network wherein the system determines a value representing estimation of traffic within a geographic area.

Gustafsson discloses a method and system for the planning and/or evaluation of radio networks wherein a probability is determined whether the service area is covered by a cell of the radio network as well as accounting for cell breathing due to traffic changes wherein the planning involves the calculation of a link budget for each service area and of a noise rise for each cell.

5. None of the cited references and the prior art of record either alone or in combination discloses the subject matter described in the applicant's independent claims above. Specifically the subject matter related to "wherein the predetermined cost function includes a term pointing out the presence of pilot pollution in the system, the term including a ratio between global traffic in pilot pollution associated with a set of active cells in an examined solution and maximum pilot pollution that can be found in the potential network configuration, and wherein at least one of the "active" sites is deactivated based on the term pointing out the present of the pilot pollution, said steps of building and optimizing the initial solution being adapted to define solutions having a geographic coverage wider than a predefined minimum coverage area and being

Art Unit: 2617

adapted to manage an amount of traffic greater than a predefined minimum value of expected traffic.”

With regards to claim 45, applicant has amended the claim to state “a non-transitory computer readable storage medium” and has indicated in the applicant’s arguments/remarks filed 06/24/10 that the non transitory computer readable storage medium is the disk disclosed on p. 3, line 14 of the specification which states “groups or modules of programs stored on disk and accessible on the network”. Therefore, with this argument and reasoning, the non transitory computer readable storage medium is the disk and the computer program product or group of computer program products are nothing more than computer program or software. And as such the examiner withdraws the 112 and 101 rejections given on the previous office action in view of the applicant’s arguments that the non transitory computer readable storage medium is the disk and the computer program product or group of computer program products are nothing more than computer program or software.

6. Therefore, since none of the cited references and prior art of record found discloses the specific subject matter described above and the previous 112 and 101 rejections have been withdrawn, the applicant’s claims 24-42 and 44-47 are allowed.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2617

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
